

# Skin cancer risk factors

## Do you have...

fair skin?

a compromised immune system?

a tendency to burn rather than tan?

a family history of melanoma?

a high number of unusual moles?

a personal history of skin cancer?

light coloured eyes?

a history of bad sunburns or solarium use?

naturally light or red hair?

Or are you aged over 50 (especially males)?

lots of freckles?

If so, **Speak to your doctor** about what skin cancer surveillance opportunities are right for you today.

Use a combination of five forms of sun protection during sun protection times
