

SPOT

the difference

Check your skin regularly and **see your doctor** if you notice a new spot, a spot that looks different from the ones around it, or a spot that has changed in size, colour or shape.

Melanoma

- May have **irregular edges**, one half bigger than the other, or an **uneven colour**.
- Can appear on skin **not normally exposed to the sun**.

Nodular melanoma

- **Grows quickly** so do not delay seeing a doctor.
- **Raised** and even colour ranging from **pink** or **red**, to **brown** or **black**.
- Firm, **dome-shaped**, may **bleed** and **crust**.

Basal cell carcinoma

- **Red, pale** or pearly colour that can be a lump or **dry, scaly** patch.
- Can ulcerate, bleed and fail to heal.

Squamous cell carcinoma

- Thickened, **red scaly spot that bleeds** easily, **crusts** or **ulcerates**.
- More common in **people over 50 years**.

MOST SKIN CANCERS CAN BE PREVENTED.
